

## Case History

### Drying expertise for Castercliff Community Primary School

When Castercliff Community Primary School near Burnley suffered a major escape of water, the pupil's continuity of education was under serious threat.

During routine maintenance to the plumbing system, the bleed valves on all the radiators were opened throughout the building as the plumbers believed that the water supply was turned off. However, the stop cock valve was not fully closed, the system was left in this state over the weekend and water had leaked out of all the radiators onto the floors in all rooms, affecting the carpets and in some rooms affecting the building structure.

A total of 14 rooms were badly contaminated but their local Rainbow office uplifted and disposed of all carpets beyond economic repair, installed a drying regime, and had the entire property back to pre-incident condition in time for the pupils to start their new term.

The schools Site Supervisor, Ernest Thornton was delighted with the speedy service the local branch supplied.

"Following a plumbing accident here at Castercliff School it was only the level of equipment and expertise of your technicians that allowed us to avoid an unscheduled closure of the school. Your efforts are much appreciated and valued". Ernest Thornton (Site Supervisor), Castercliff Community Primary School, Nelson
